

## **AFTERCARE FOR HYSTEOSALPINGOGRAM**

1. Wear a menstrual pad (no tampons) for at least the next 24 hours due to contrast leakage from the vagina and slight spotting.
2. Avoid intercourse for the next 24 hours to decrease the chance of infection.
3. Do not use aspirin products for the next 24 hours. Aspirin can cause prolonged bleeding.

Call your Doctor immediately if you experience any of the following:

- Heavy bleeding (more than a menstrual pad an hour)
- Vaginal bleeding that continues for longer than 3-4 days
- A fever higher than 100.5 F
- Severe abdominal pain
